## Simplified work and improved hygiene: Miele fresh water dishwasher with integrated drying

- ▶ Innovative technology for SPEEDair model versions
- ▶ Automatic liquid dispensing even where space is at a premium – thanks to integrated pump

**Gütersloh/Stuttgart/Hamburg. – Plastic crockery and glasses often require the use of a tea-towel if they are to be dried properly. But that costs time. And risks are posed by tea-towels which are not replaced regularly. Manual intervention is now superfluous on SPEEDair fresh water dishwashers thanks to a fan-assisted drying system. These can optionally be fitted with an integrated dispenser pump which further simplifies everyday work.**

Short cycle times and dry crockery are no longer a contradiction in terms: Thanks to new Dry+ drying, the entire load can be removed immediately at the end of a programme cycle and put into storage – without having to dry items by hand. During the drying process, hot moisture-laden air is drawn out of the cabinet and replaced with fresh room air, resulting in a mere 8-minute extension to the programme cycle.

Automatic liquid dispensing of process chemicals ensures greater efficiency in everyday work. Repeatable and safe processes reduce the input on the part of users. This is achieved through an integrated dispenser pump in the plinth: A solution which does not require any external accessories and can be implemented even in the confined space available.

Matching Miele ProCare Shine process chemicals are available: Detergent and rinse aid tailored to the needs of Miele machines in terms of cleaning performance and machine compatibility. Together with matching baskets and inserts, this holistic system for the safe and convenient reprocessing of crockery therefore consists of several components.

**Company profile:** Miele is the world's leading manufacturer of premium domestic appliances including cooking, baking and steam-cooking appliances, refrigeration products, coffee makers, dishwashers and laundry and floor care products. This line-up is augmented by dishwashers, washing machines and tumble dryers for commercial use as well as washer-disinfectors and sterilisers for use in medical and laboratory applications (Miele Professional). The Miele company, founded in 1899, has eight production plants in Germany as well as one plant each in Austria, the Czech Republic, China, Romania and Poland. These are joined by the two plants belonging to Miele's Italian medical technology subsidiary Steelco. Turnover in the 2018/19 business year was around € 4.16 bn, with a share of business outside Germany of approx. 71%. Miele is represented with its own sales subsidiaries and via importers in almost 100 countries. Throughout the world, the family-run enterprise, now in its fourth generation, employs a workforce of around 20,500, whereof 11,050 are employed in Germany. The company has its headquarters in Gütersloh in Westphalia.
