New G 5000 dishwashers: Top features and improved energy efficiency on entry-line models

- ▶ Fast cleaning in only 58 minutes
- ▶ Conservation of resources through EcoPower technology and AutoOpen drying

Gütersloh, April 30, 2020. – Miele launches new, high-performance entry-line G 5000 dishwashers. Exclusive features, previously the preserve of higher-priced models, now included on entry-line models, offering compelling specifications at attractive prices. All G 5000 models have at least an A++ energy efficiency rating, use as little as 6.0 litres of water and sport improved baskets and redesigned fascia panels.

Clean crockery, cutlery and pots and pans sparklingly clean in less than an hour? Not a problem for dishwashers from the G 5000 generation. With the QuickPowerWash cycle developed by Miele and matching Ultra All in 1 tablets, these models achieve the best possible cleaning results in only 58 minutes. Thanks to special-purpose ingredients, these tablets dissolve in the shortest of times, releasing active chemicals early on in the wash cycle.

With water consumption as low as 6 litres in the 'Automatic' programme and an energy efficiency rating of at least 'A++', the new Miele dishwashers are particularly energy-efficient. This is achieved through EcoPower technology with its special-purpose circulation pump, optimised spray arms and an efficient filtration system. Add to this patented AutoOpen drying, depending on the model: a feature only available from Miele. In this case, the door opens to the ajar position at the end of a programme in order to ensure excellent drying results, even on plastics, laminates and glass. The associated reduced main wash temperature, accelerated drying and a shorter cycle time saves time and energy.

To make loading and unloading as intuitive and fast as possible, these dishwashers feature FlexiLine baskets. Wider handles make the removal of baskets simple, whatever the position. Even the name indicates how simple and versatile it is to accommodate items of crockery and cutlery in the baskets. Delicate tea and coffee cups are held securely on the height-adjustable FlexCare cup rack in the upper basket with its structured non-slip surface. Large pots and pans require more space. This is where a hinged row of spikes in the lower basket comes in, providing a large surface once it has been folded down flat against the base.

Alongside the upper and lower baskets, even greater flexibility is achieved, depending on the model specifications, by the additional patented 3D-Multiflex drawer, representing a full third dishwashing level. Alongside knives, forks and spoons, this third level is also able to accommodate smaller items of crockery such as espresso cups or tapas plates as the right-hand side can be lowered to give greater depth. Bulkier items such as ladles and salad serving cutlery is held securely in the fixed central section with its integrated row of spikes. The sliding left-hand section allows the positioning of stemware in the upper basket below. All movable sections, handles and levers are coloured yellow for ease of recognition.

Aesthetically, these entry-line models are very close in terms of design to the G 7000 series, for example with respect to their characteristic controls. On fasciad models, the row of buttons below the programmes and the display has been adopted. Using the controls on the high-quality CleanSteel stainless-steel fascia is intuitive, with programmes launched at the touch of a button. Depending on the model version, up to four colours are available (CleanSteel, obsidian black, brilliant white and havana brown).

The market launch is scheduled for April 2020.

Company profile: Miele is the world's leading manufacturer of premium domestic appliances including cooking, baking and steam-cooking appliances, refrigeration products, coffee makers, dishwashers and laundry and floor care products. This line-up is augmented by dishwashers, washing machines and tumble dryers for commercial use as well as washer-disinfectors and sterilisers for use in medical and laboratory applications (Miele Professional). The Miele company, founded in 1899, has eight production plants in Germany as well as one plant each in Austria, the Czech Republic, China, Romania and Poland. These are joined by the two plants belonging to Miele's Italian medical technology subsidiary Steelco. Turnover in the 2018/19 business year was around € 4.16 bn, with a share of business outside Germany of approx. 71%. Miele is represented with its own sales subsidiaries and via importers in almost 100 countries. Throughout the world, the family-run enterprise, now in its fourth generation, employs a workforce of around 20,500, whereof 11,050 are employed in Germany. The company has its headquarters in Gütersloh in Westphalia.
