Miele Cube and Cube X small sterilisers: connectivity ready and with practical features

- ▶ Ready for integration in a surgery network
- ▶ EcoDry technology adjusts drying duration to load size

Gütersloh/Cologne, March 14, 2023. – Miele rounds off its dental portfolio with Cube and Cube X small sterilisers. Like thermal disinfectors, these units simplify instrument reprocessing, for example through connection to Miele full demineralisation cartridges. These sterilisers are connectivity-enabled and allow integration into a surgery network.

As an integral part of a comprehensive system, the Cube model, available with two chamber sizes (17 and 22 l), optimises the instrument reprocessing cycle. With standard B Class cycles and the relevant test programmes, the machines meet all the requirements for safe and reliable reprocessing. The Cube X premium model, available with the same chamber sizes, offers particularly short cycle times, state-of-the-art drying technology and programmable starting times to simplify everyday work. Furthermore, this model comes replete with particularly advanced network technology: On request, users of the Cube X can check and digitally approve sterilisation cycles. Both the Cube and Cube X are WiFi-ready ex works and are incredibly easy to integrate into an existing network.

With a wide range of options aimed at conserving resources, Miele small sterilisers reduce consumption and running costs. Take, for example, innovative EcoDry technology which adapts the duration of drying to the load size and reliably delivers sterilised instruments within the space of no more than 30 minutes.

Charging the water tank can be done either manually or automatically via the water treatment system connection. Practices which combine the use of a Cube or Cube X unit with a Miele thermal disinfectant and hence require a particularly large volume of demineralised water now see their needs met particularly fast in the form of Miele full demineralisation cartridges.

Company profile: Miele is the world's leading manufacturer of premium domestic appliances including cooking, baking and steam-cooking appliances, refrigeration products, coffee makers, dishwashers and laundry and floor care products. Their product portfolio also includes dishwashers, washing machines and tumble dryers for commercial use as well as washer-disinfectors and sterilisers for use in medical and laboratory applications. Founded in 1899, the company has eight production plants in Germany, one each in Austria, the Czech Republic, China, Romania and Poland as well as two production plants belonging to its Italian medical technology subsidiary Steelco. Sales in the 2022 business year amounted to around € 5.43 bn. Miele is represented with its own sales subsidiaries and via importers in almost 100 countries/regions. Throughout the world, the family-run enterprise, now in its fourth generation, employs a workforce of around 23,300, of which approx. 11,900 employees work in Germany. The company has its headquarters in Gütersloh in Westphalia.
