## More freedom in kitchen planning: New size, new finish, new design for range hoods

- ▶ Full 2in1 performance now in a compact 60-cm format – also available in matte black
- ▶ Integrated glass panel hood for virtually invisible installation solutions
- ▶ More design freedom for different kitchen layouts

**Gütersloh/Milan, April 21, 2026 – Cooking, talking, gathering: Today, the kitchen is part of the living space. The demands placed on the range hood are correspondingly high – it should be powerful, yet unobtrusive at the same time. At EuroCucina 2026, Miele is showcasing two new solutions that meet precisely these requirements: a cooktop with an integrated range hood in a compact 60-cm format, as well as a new built-in range hood with a glass panel.**

With the new KMDA 5649, Miele is launching its first 2in1 solution in a 60-cm width. The appliance offers four full-size cooking zones, including a FlexZone. This brings the 2in1 system to the most common kitchen format – and makes it a realistic option even for smaller kitchens. Fumes are captured directly where they are generated – for short distances and a clean, uncluttered look in the kitchen without a separate hood. The new model targets a growing segment: according to NIQ/GfK Panelmarkt\*, around 55,000 appliances with an integrated 60cm-wide extractor hood were sold in Western Europe in 2025. This accounts for approximately 10 percent of all models in the 2in1 segment – and the trend is set to continue upwards. Additionally, the KMDA 5649 follows the trend toward matte finishes and is also available in a matte black version.

In addition to the new format, Miele is expanding its portfolio with a built-in range hood. The integrated glass panel hood combines the best of both worlds: the ease of use and furniture protection of a flat panel hood with the virtually invisible integration of a fan unit. When closed, the hood is almost completely integrated into the wall cabinet. Storage space remains largely intact and is fully usable without compromising the kitchen's appearance – everything is hidden behind the cabinet front. A single tap – and the light comes on: The lighting can be activated directly through the closed glass panel (Tap2Light). When cooking, the glass panel folds forward. The controls are directly accessible, and the cabinet body is protected from rising steam. The new series is available in two widths: as the DAG 2650 (60 cm) and DAG 2950 (90 cm).

Both new models follow a clear concept: the range hood should adapt to the kitchen's architecture, not the other way around. With this, Miele is specifically expanding the selection

for kitchen studios, architects and end customers. At the same time, the launch marks a targeted expansion of the premium range of cooker hoods through new formats and designs, aimed at tapping into high-growth segments.

“Modern kitchen architecture calls for solutions that do not take center stage, but rather integrate seamlessly,” says Dr. Uwe Brunkhorst, Senior Vice President of Business Unit Cooking at Miele. “With our new range hood solutions, we are specifically expanding the possibilities in kitchen planning—from the more compact 2in1 format to the new built-in range hood .”

Both new products will be available in Germany, Austria, and Switzerland (DACH) and other European markets starting in October 2026 and will be unveiled for the first time at EuroCucina in Milan in April.

**About Miele:** Since 1899, Miele has lived up to its brand promise of “Immer Besser” (Always Better) in terms of quality, innovation, and timeless elegance. As a global leader in premium home appliances, the company inspires customers with pioneering solutions for the connected home. It also offers machines, systems, and services for commercial use in settings such as hotels, sports and care facilities, and medical technology. With durable and energy-efficient appliances, Miele helps its customers make their daily lives as sustainable as possible. The company has been owned by the two founding families, Miele and Zinkann, for 127 years. In the 2025 fiscal year, Miele generated revenue of 5.16 billion euros with approximately 23,000 employees. The global network comprises 19 production sites and 49 service and sales companies (as of March 2026). The company is headquartered in Gütersloh, North Rhine-Westphalia.

## There are four photos accompanying this text

**Photo 1:** The 60-cm KMDA 5649 cooktop with integrated extractor combines steam extraction directly into the cooking surface, eliminating the need for a separate range hood – for a calm, open kitchen design without visual interruptions. (Photo: Miele)

**Photo 2:** The integrated glass panel hood DAG 2950 is virtually invisible when closed, concealed within the wall cabinet; during cooking, the panel flips up, allowing for direct operation and providing additional protection for the cabinet body against rising steam. (Photo: Miele)

**Photo 3:** When opened, the DAG 2950 demonstrates its dual function: whilst the hood reliably captures cooking fumes, the storage space in the wall unit remains accessible and usable. (Photo Miele)

**Photo 4:** The view from below highlights the clean, minimalist design of the DAG 2950 glass panel hood – with its precise lines and optimal capture of steam directly at the hob. (Photo: Miele)
