

New perspectives on urban living: Miele unveils a concept in response to limited living space

- ▶ ‘Miele Compact Living: Kitchen Unit powered by Hettich’ combines cooking, dining and working in a compact space
- ▶ Multifunctional kitchen units and digital assistance form an integrated kitchen furniture system

Gütersloh/Berlin, June 30, 2026 – Living space is becoming increasingly limited. Cities are growing, floor plans are shrinking – and with them the traditional functions of the kitchen, dining room and home office. With its “Miele Compact Living: Kitchen Unit powered by Hettich” concept, Miele demonstrates how this trend can be not only accommodated but also reimagined: as a multifunctional kitchen furniture system designed for minimal space.

The shift towards more compact urban living places new demands on furniture, domestic appliances and connected household processes. As part of “Universal Home”, a consortium of leading technology companies and international service providers, concepts for new forms of living are being developed. Miele and Hettich are taking one of these approaches and implementing it as an exhibition concept – featuring built-in kitchen appliances and motorised furniture fittings. “The concept arose from the question of how we can translate our expertise in kitchen appliances and cooking processes into the growing trend of compact cities. We see our role here not merely as an appliance manufacturer, but as a co-creator of future living spaces,” says Janina Forberger, Vice President of Design at Miele.

Integrated solutions for everyday life in small spaces

The focus is on modular and flexible kitchen furniture that is more than just a kitchen. It also serves as a cooking station, dining table and workspace all at once. The idea behind it is simple: instead of separating spaces, functions intertwine – and, thanks to flexible and adjustable elements, adapt to everyday life rather than the floor plan. A workspace in the morning, a cooking surface at lunchtime, a meeting place in the evening: the unit can be used differently depending on the situation.

Miele already offers appliances suitable for use in small spaces. These include, among other things, combination units comprising an oven and microwave, or a steam cooking drawer (available from March 2027). This allows different cooking methods, such as baking, reheating and steam cooking, to be integrated into a classic 60-centimetre kitchen niche.

This solution is also included in the concept study 'Miele Compact Living: Kitchen Unit powered by Hettich'.

Digital assistance as part of the living concept

At the same time, Miele is taking space in this concept study a step further digitally. Digital features accompany the entire cooking process – from the recipe idea through to adaptation to individual needs, shopping, the storage assistant and assisted meal preparation. The app plans workflows, synchronises appliances and guides users step by step through the menu. The aim: less complexity, more enjoyment, safety and health. Some of these features are already available in the Miele app today.

The concept also sets new trends in terms of materials: using natural surfaces and sustainable raw materials. Materials are used not only for their appearance but also to be experienced with all the senses – through depth, texture and haptics. The combination of natural, partly regionally sourced materials with a colour and lighting scheme clearly structures the functions within the space, thereby conveying an authentic experience of nature.
